of South Australia  
Primary Industries  
and Regions SA

---

Seed Services Australia has been providing seed testing and seed certification services of exceptional quality to Australia's seed and grain industries for over eight decades. Our team of highly qualified and experienced scientists and seed analysts has access to the most advanced and powerful technology.

---

Australia's trading partners trust Seed Services Australia testing results and certificates, making access to international markets easier. We are part of Primary Industries and Regions SA, which assists primary industries and regions to grow, innovate and maximise their economic growth potential.

Seed Services Australia offers internationally accredited and recognised seed quality programs to growers, processors, marketers and exporters of seed. We are an accredited ISTA seed testing laboratory and offer OECD, AOSCA, Domestic and SureSeed® seed certification services to clients across Australia.

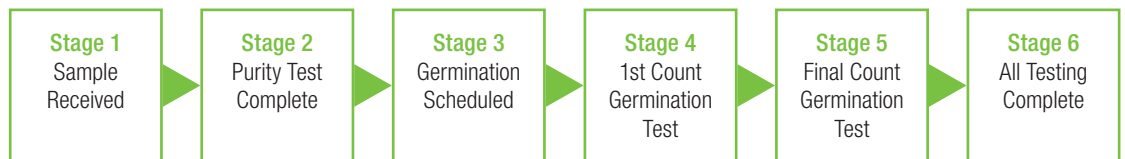

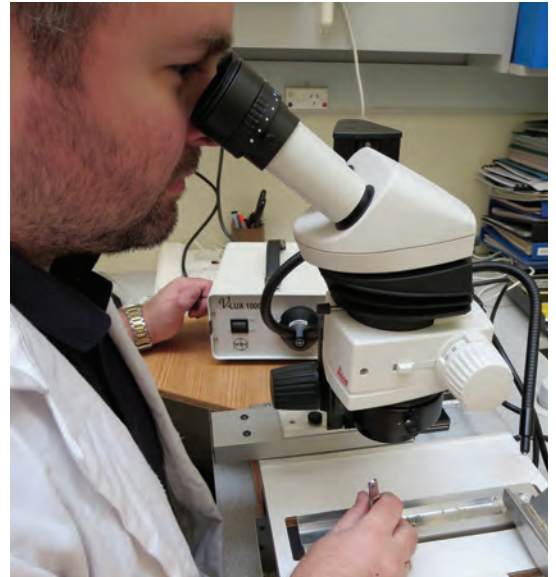

Many of Australia's leading seed companies and exporters trust Seed Services Australia to ensure their continued access to domestic and international markets. Our valued clients include Heritage Seeds, Seed Genetics International, PGG Wrightson Seeds, Nuseed and Seednet.

## Seed Services Australia

- builds profit through seed quality
- increases access to international markets through independent testing and seed certification
- provides accurate, reliable and fast assessments on physical purity, weed seed content, germination percentage and many other seed tests
- has a team of highly experienced analysts that test a wide range of seed and grain species in modern, world-class facilities
- increases supply chain profitability in producing and marketing quality seed.

When it comes to marketing seed, time is money. Our innovative services will give you a competitive edge.

We use the latest advances in information technology to deliver your seed testing results faster than ever. Our online results are e-delivered up to four times daily and our secure PDF certificates of analysis ensure ease of communication. Our new Field Inspector's Smartphone App ensures our seed grower and seed company clients receive their field inspection reports and harvest delivery documentation promptly.

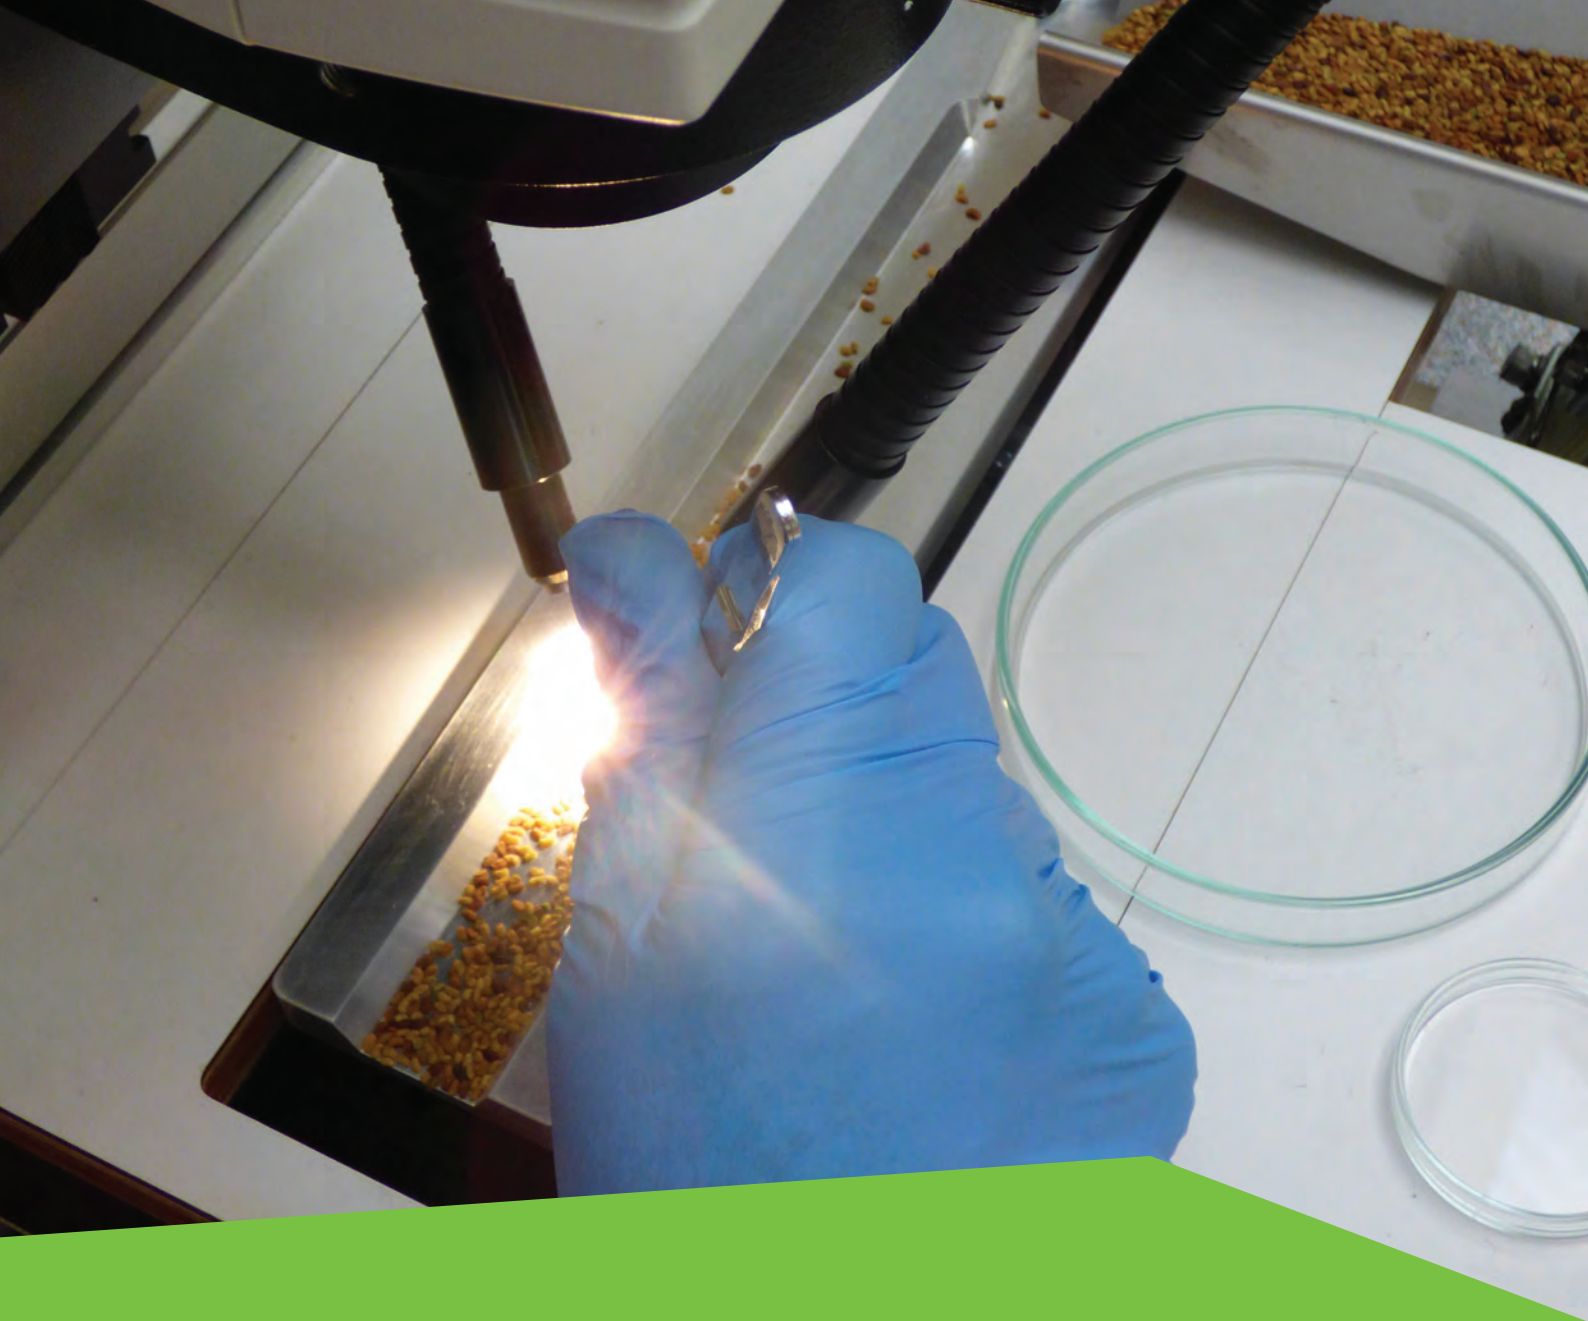

*"The enhancement of receiving certificates of analysis by email, in addition to being able to download previously issued certificates directly from the Seeds Online website, is a key tool in managing our business. Importantly, the automated test results emails that we receive each day helps me to adjust our seed processing procedures in real time as the progressive results can highlight the detrimental impacts of seasonal conditions on seed quality."*

**Graham Ramsdale**  
Proprietor, Tatiara Seeds, Bordertown,  
South Australia

Choose to access or receive test results in three ways:

- 1. Seeds Online** is our outstanding and secure password-protected internet test results service. You can review test results online and download current or past copies of seed analysis certificates at the click of a button.
- 2. E-certificates** for all commercial, certified, SureSeed® and quarantine certificate types are emailed immediately upon completion of testing.
- 3. E-notifications** are provided up to four times daily in six progressive stages of the seed testing cycle (as shown above).
